

ISOFOTON PARTICIPATES IN INTERSOLAR 2008

- Isofoton will present the latest in photovoltaic and thermal solar energy at the Intersolar trade fair, which will be held from June 12-14 in Germany.
- The company will display its products at the official pavilion of ICEX.

Madrid, 09/05/08 – Isofoton, the leading solar technology company in Spain, will participate in Intersolar 2008, which will be held from June 12-14 at the New Trade Fair Center installations in Munich, Germany.

At this year's Intersolar, Isofoton will present the latest in photovoltaic and thermal solar energy, with the most advanced technology, in its strategic commitment to innovation through strong investment in R+D.

Regarding photovoltaic solar energy products, the company will present the IS-220, ISF-200, and IS-180 modules with a higher efficiency thanks to the numerous technological improvements developed in cell manufacturing. These products complete the current series for grid connection systems, such as those used in large photovoltaic power generation plants.

In thermal solar energy, Isofoton will display the Isotherm Plus flat-plate collector, which is considered one of the best products on a European level due to its efficiency curve and outstanding technical quality.

Isofoton will be located in Munich at stand 126A in Hall C2 of the trade fair park, (accessible by the North Entrance), at the official pavilion of the Spanish Institute of External Commerce (Instituto Español de Comercio Exterior ICEX), an entity attending the fair for the second consecutive year.

This year the ICEX is organizing the Spanish participation in the Intersolar fair with an official pavilion. This pavilion will include the stands of the principal companies from the solar energy sector, displaying brands and products that are exclusively manufactured in Spain, a clear example of the excellent moment that the solar energy sector is currently experiencing in our country.

Intersolar has been held on an annual basis since it began in 2002, and has currently become the benchmark fair in Europe for Solar Energy technology. The fair is focused on photovoltaic and thermal energy, as well as on their uses in solar architecture. This is the first year that the fair will be held in Munich, a move caused by the need for larger facilities, due to the growth that the event has experienced over the past few years.

About Isofoton

Isofoton is a leading Spanish company in the development of technological solutions for the generation and use of Solar Energy in its three technologies: Photovoltaic, low-temperature Thermal, and high concentration Photovoltaic. It is globally committed to Society and the Environment.

The company is present in over 60 countries and has 9 subsidiaries, in Italy, the US, Bolivia, Ecuador, the Dominican Republic, Algeria, Morocco, Senegal, and China, while also consolidating its position of leadership on the Spanish market.

Since its beginnings 27 years ago Isofoton has been a pioneering company in research and development, its innovative character is one of the identifying characteristics. In 2007, investment in R+D totaled 6% of the annual turnover.
