

Isofoton to take part in EU PVSEC 2008

Isofoton will actively participate in the 23rd edition of the European Photovoltaic Solar Energy Conference being held in Valencia between 1 and 5 September.

Isofoton will also sponsor the Industry Forum organised by the European Photovoltaic-Industry Association (EPIA).

Isofoton, a leader in solar technology in Spain will take part in the 23rd edition of the European Photovoltaic Solar Energy Conference (PVSEC) between 1 and 5 September, which this year is being held in the Valencia fair enclosure. This event is a benchmark for the international energy sector, presenting the latest innovations and debating the future of photovoltaic solar power.

Isofoton will be attending the PVSEC 2008 with an innovative exhibitor in Pavilion 1, as part of the Med Sun Experience concept. This space will reflect the company's commitment in the mediterranean arc, a region where significant developments are being made in photovoltaic solar energy, and where Isofoton has a considerable market presence through its subsidiaries.

During the four days of the exhibition, Isofoton will display its most notable latest projects for photovoltaic generation plants, roof systems, and architectural integration.

Visitors approaching the stand will also be able to see the progress of works for the company's new facilities in Malaga, which will culminate in the new Isofoton High-Performance Solar Centre in 2009. This new 38,000 m² plant will increase the company's production capacity so as to face future market demand.

Isofoton will be sponsoring the Industry Forum organised by the European Photovoltaic-Industry Association (EPIA). This important forum will take place on the third day of the PVSEC and will discuss how the European Union can lead the Third Industrial Revolution, and how photovoltaic solar power can contribute in this respect.

Jeremy Rifkin, President of the Foundation on Economics Trends and EU adviser for economy, climate change, energy security, and sustainable development will be responsible for bringing this forum to a close.

About Isofoton

Isofoton is the leading spanish company in the development of technological solutions for generating and exploiting solar energy with its three technologies: photovoltaics, low-temperature thermal solar energy, and high-concentration photovoltaics; and it is globally committed to society and the environment.

The company is present in more than 60 countries and has 9 subsidiaries in italy, usa, bolivia, Ecuador, the Dominican Republic, Algeria, Morocco, Senegal, and China, and is also strengthening its position as leader in the spanish market.

Since its beginnings 27 years ago, Isofoton has been a pioneer in research and development, and its innovative nature is its hallmark.
